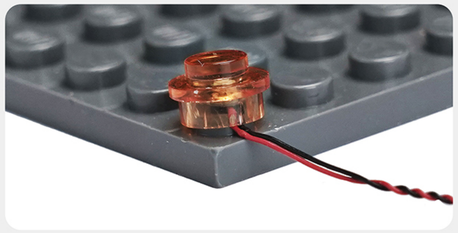
## TIPS

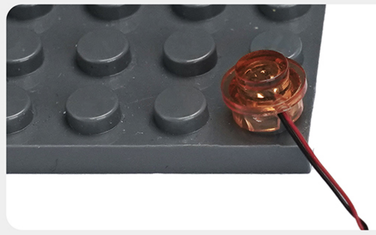
**The lamp wire needs to be threaded through the cut of the round plate and installed on the building block.**

**The plate without slit**



The squeeze causes the protective layer of the wire to be torn apart, the positive and negative wires touch together, and the set is short-cicuited and the hot or wire is crushed, the wire to be disconnected and don't work.

**The plate with slit**



The wire has enough space to avoid being squeezed endowed with longer service life and more stable effect.

# 123
