

21329 Fender Stratocaster LED lighting Kit (Standard style) LG129/GC129

Instructions for installing this kit:

Step 1

Test:

This product has 4 bags, and the battery box is a gift. (Without battery)

Take out the parts in bag 4. (the parts used in this article are all samples, and may be slightly different from the finished product, please forgive me).

Take out an 6-seater expansion board from the No. 3 bag.

The power supplies that can be used with the USB power cord are as follows.

USB connectors to connect devices

Tear off the seal of the expansion board.

Please pay attention to the use of the interface. The interface is small. Please use it carefully: the = number of the 2P interface is aligned with the = number of the expansion board. The equal sign on the expansion board refers to the two solder joints on the outside, not the two inside the jack Metal pin.

Connect the USB power cord to the expansion board.

The other side of the USB power cord is connected to the mobile power supply (power supply is self-provided).

Take out the lighting from the No. 1 bag.

Connect them to the expansion board. Test whether the lighting is normal, if there is any abnormality, please contact us in time.

After the test is complete, unplug the lighting from the expansion board. Put the non-abnormal lighting parts back into the original bag first.

In order to avoid not lighting up after installation, the lighting in other bags should be tested in the same way before installation.

Note:

Please be careful when installing. The lamp wire is relatively slender and cannot be pressed on the raised position of the building block. It should pass along the gap, otherwise the lamp wire will be pinched.

start installation:

Note:

Please be careful when installing. The lamp wire is relatively slender and cannot be pressed on the raised position of the building block. It should pass along the gap, otherwise the lamp wire will be pinched.

Take out the two colorful flashing light strips from the No. 3 bag (the color of the light pellets is white and transparent when it is not powered on).

Use scissors to cut off the excess.

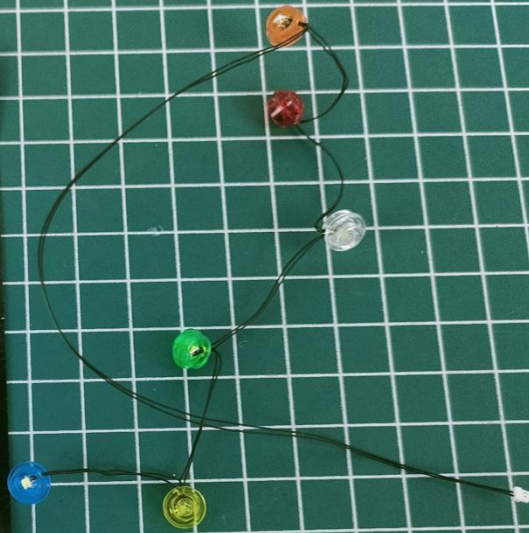

The USB power cord does not need to be unplugged during installation (the power cord is unplugged in the picture).

Connect the other end of the black wire to the electric guitar.

The installation is complete.

The above are ideas and instructions provided by our designers. Please move on:

- 1: Do you have any suggestions about the material and quality of our products?
- 2: Do you have any suggestions on the installation instructions and the degree of difficulty of the installation?
- 3: If you have better installation method and ideas, please contact us in time.
