Action Control Module

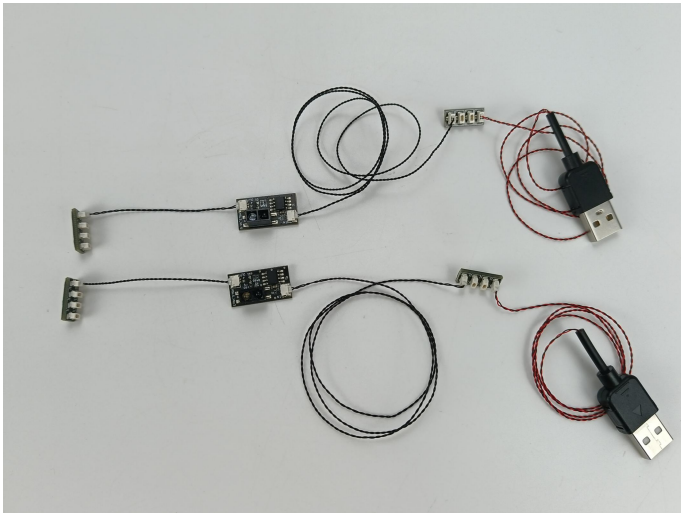

When the obstruction generate a reflected signal, the corresponding module can be turned on or off.

TIPS: 1. The range of signal reception within 10cm of the vertical "signal receiver".

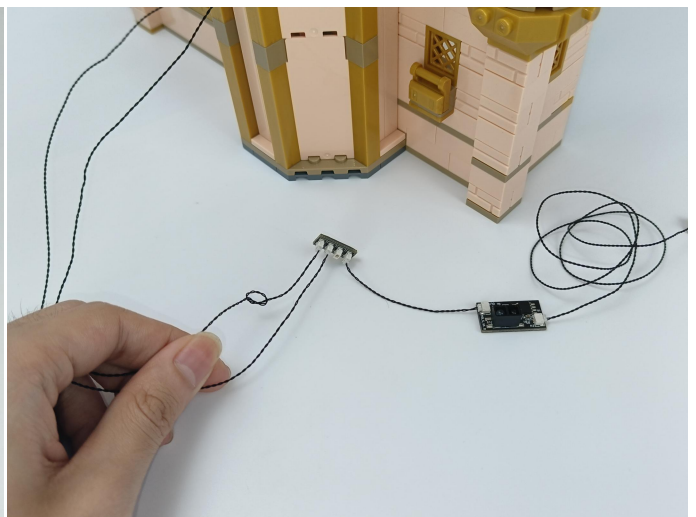

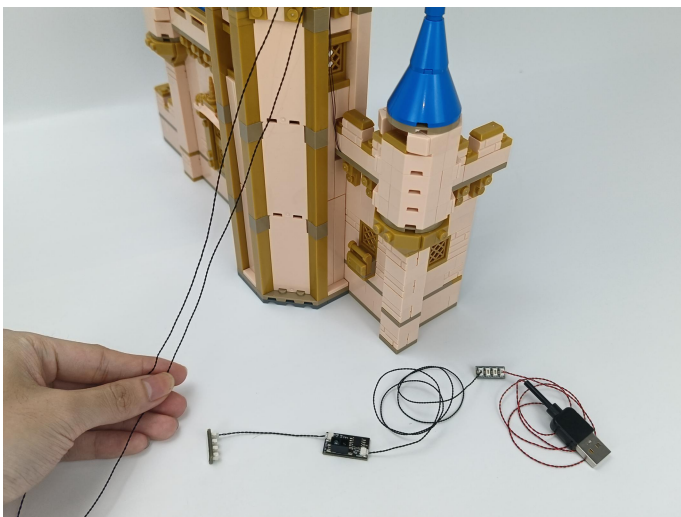

2. The frequency of objects passing through the "signal receiver" cannot be too high or the uncontrollable situations will occur.

3. The overall module is still working and consuming power even if the module is turned off. please turn off the power on the battery box or power bank If the light no longer be needed. please replace the power supply and try again If the light does not work for a period of time.
