

10272 Old Trafford - Manchester United LED lighting Kit (Sound and Light Remote Control Version) LG85/GC85

Instructions for installing this kit:

Step 1

Test:

This product has 7 bags, and the No. 5 battery box is a gift. (Without battery)

Take out the battery box in the No. 6 bag (the parts used in this article are all samples, and may be slightly different from the finished product, please forgive me).

The figure below shows the USB power cord. Its usage is similar to that of a battery box. It can be powered by a power bank or a mobile phone charger. The battery box and USB power cord can be freely selected (the battery box is used in this article).

The power supplies that can be used with the USB power cord are as follows.

USB connectors to connect devices

Open the battery compartment cover.

Install the battery (battery provided by yourself), and then close the battery compartment cover.

Take out the lighting parts from the No. 1 bag and prepare for testing.

Remove the expansion board from the small bag.

Lift the seal of the expansion board.

Take out the battery box (or USB power cord) and expansion board separately.

Please pay attention to the use of the interface. The interface is small. Please use it carefully: the = number of the 2P interface is aligned with the = number of the expansion board. The equal sign on the expansion board refers to the two solder joints on the outside, not the two inside the jack Metal pin.

Connect them.

Connect the lights in the No. 1 bag to the expansion board.

Turn on the power switch.

Test whether the lighting is normal, if there is any abnormality, please contact us in time.

After the test is complete, unplug the lighting from the expansion board.

To avoid losing or mixing up the lighting, put the tested lighting back into the original bag first.

In order to prevent the lighting from not bright after installation, the lighting in other bags are also tested in the same way. After testing a bag, please temporarily put it back in the original bag to avoid confusion with each other.

Note:

Please be careful when installing. The lamp wire is relatively slender and cannot be pressed on the raised position of the building block. It should pass along the gap, otherwise the lamp wire will be pinched.

start installation:

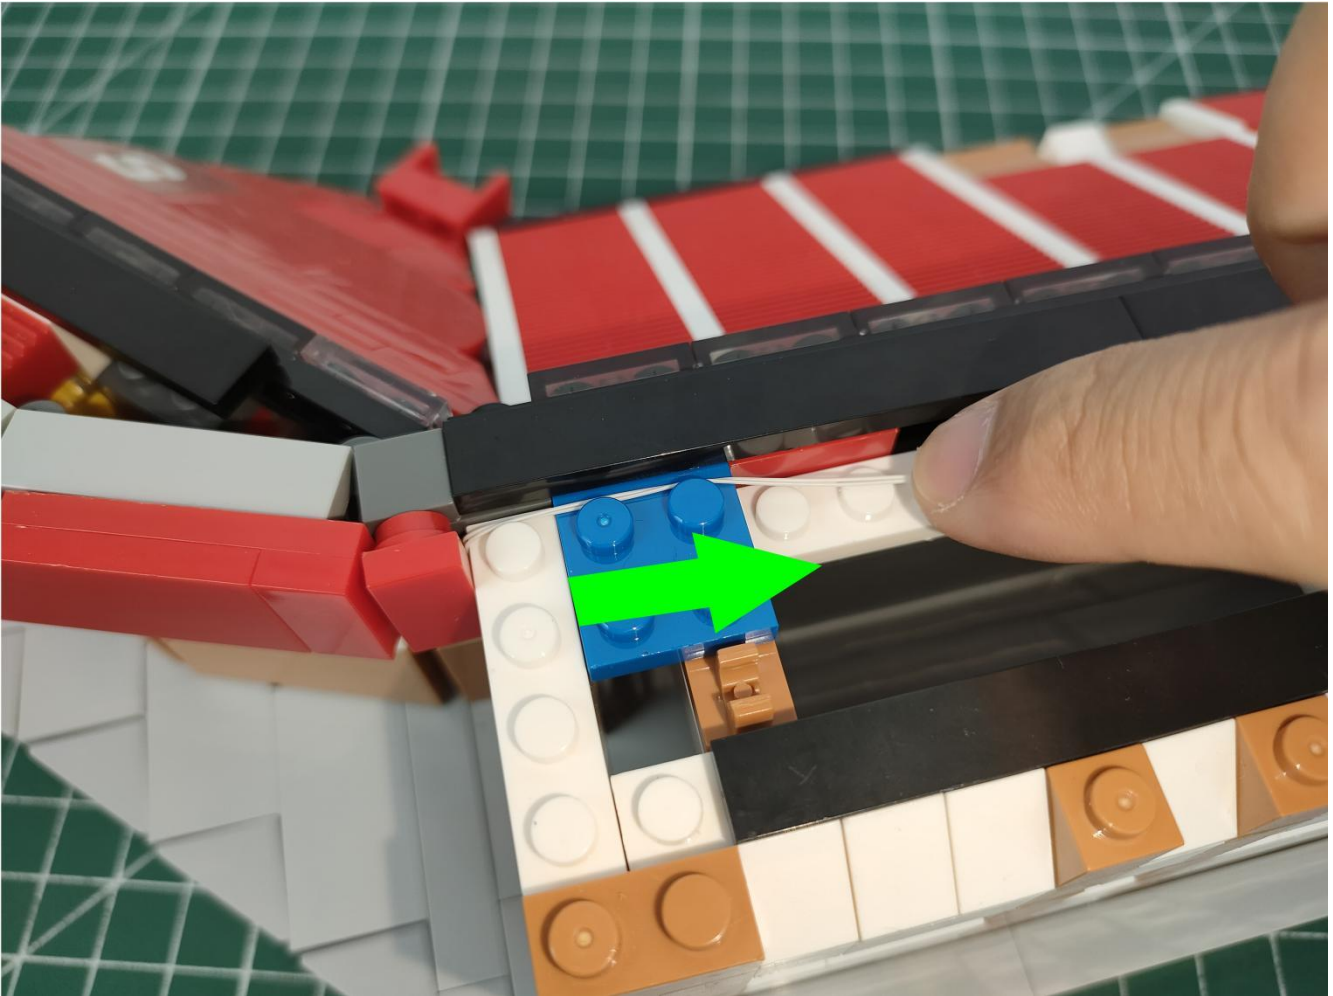

Note:

Please be careful when installing. The lamp wire is relatively slender and cannot be pressed on the raised position of the building block. It should pass along the gap, otherwise the lamp wire will be pinched.
