TIPS

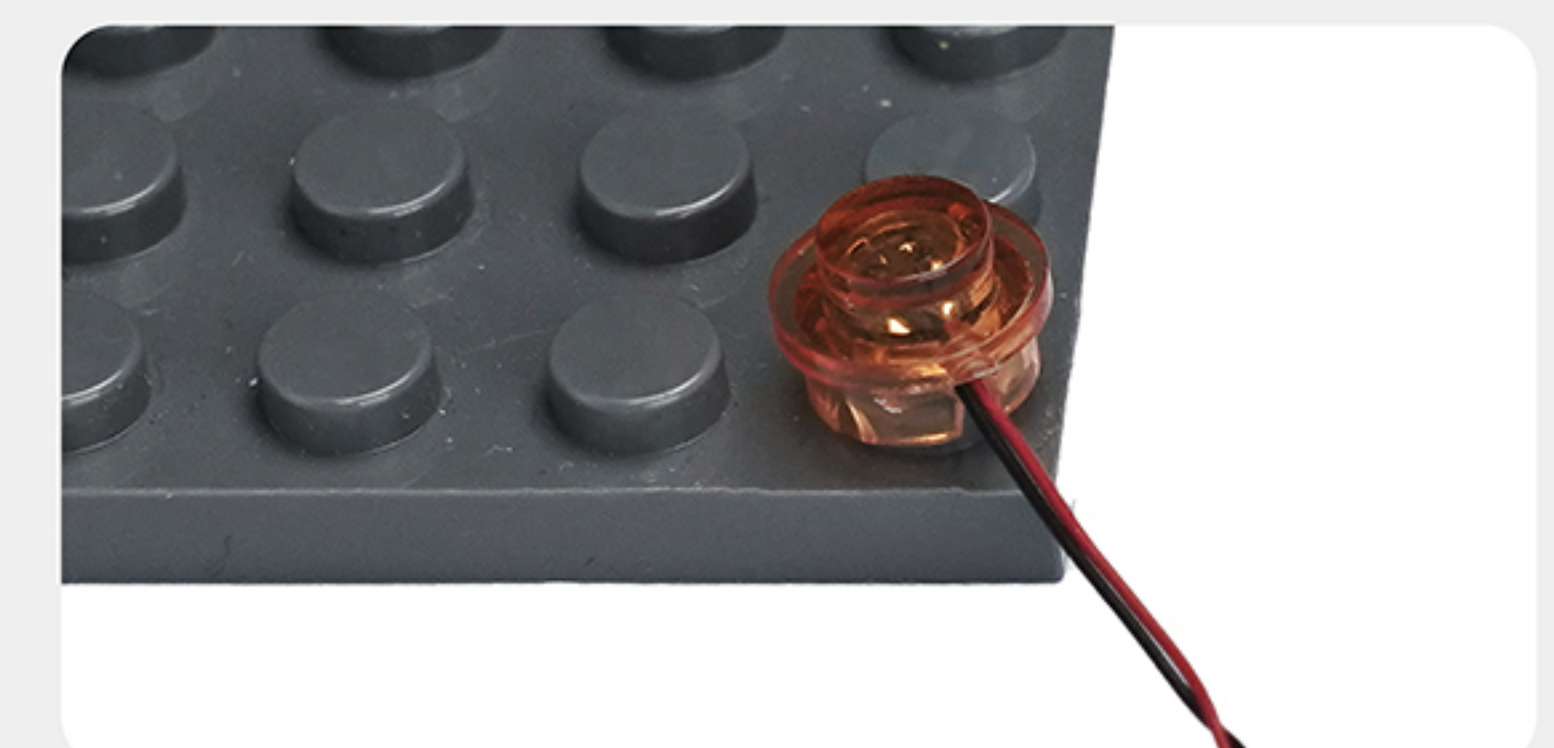

The lamp wire needs to be threaded through the cut of the round plate and installed on the building block.

The plate without slit

The squeeze causes the protective layer of the wire to be torn apart, the positive and negative wires touch together, and the set is short-circuited and the hot or wire is crushed, the wire to be disconnected and don't work.

The plate with slit

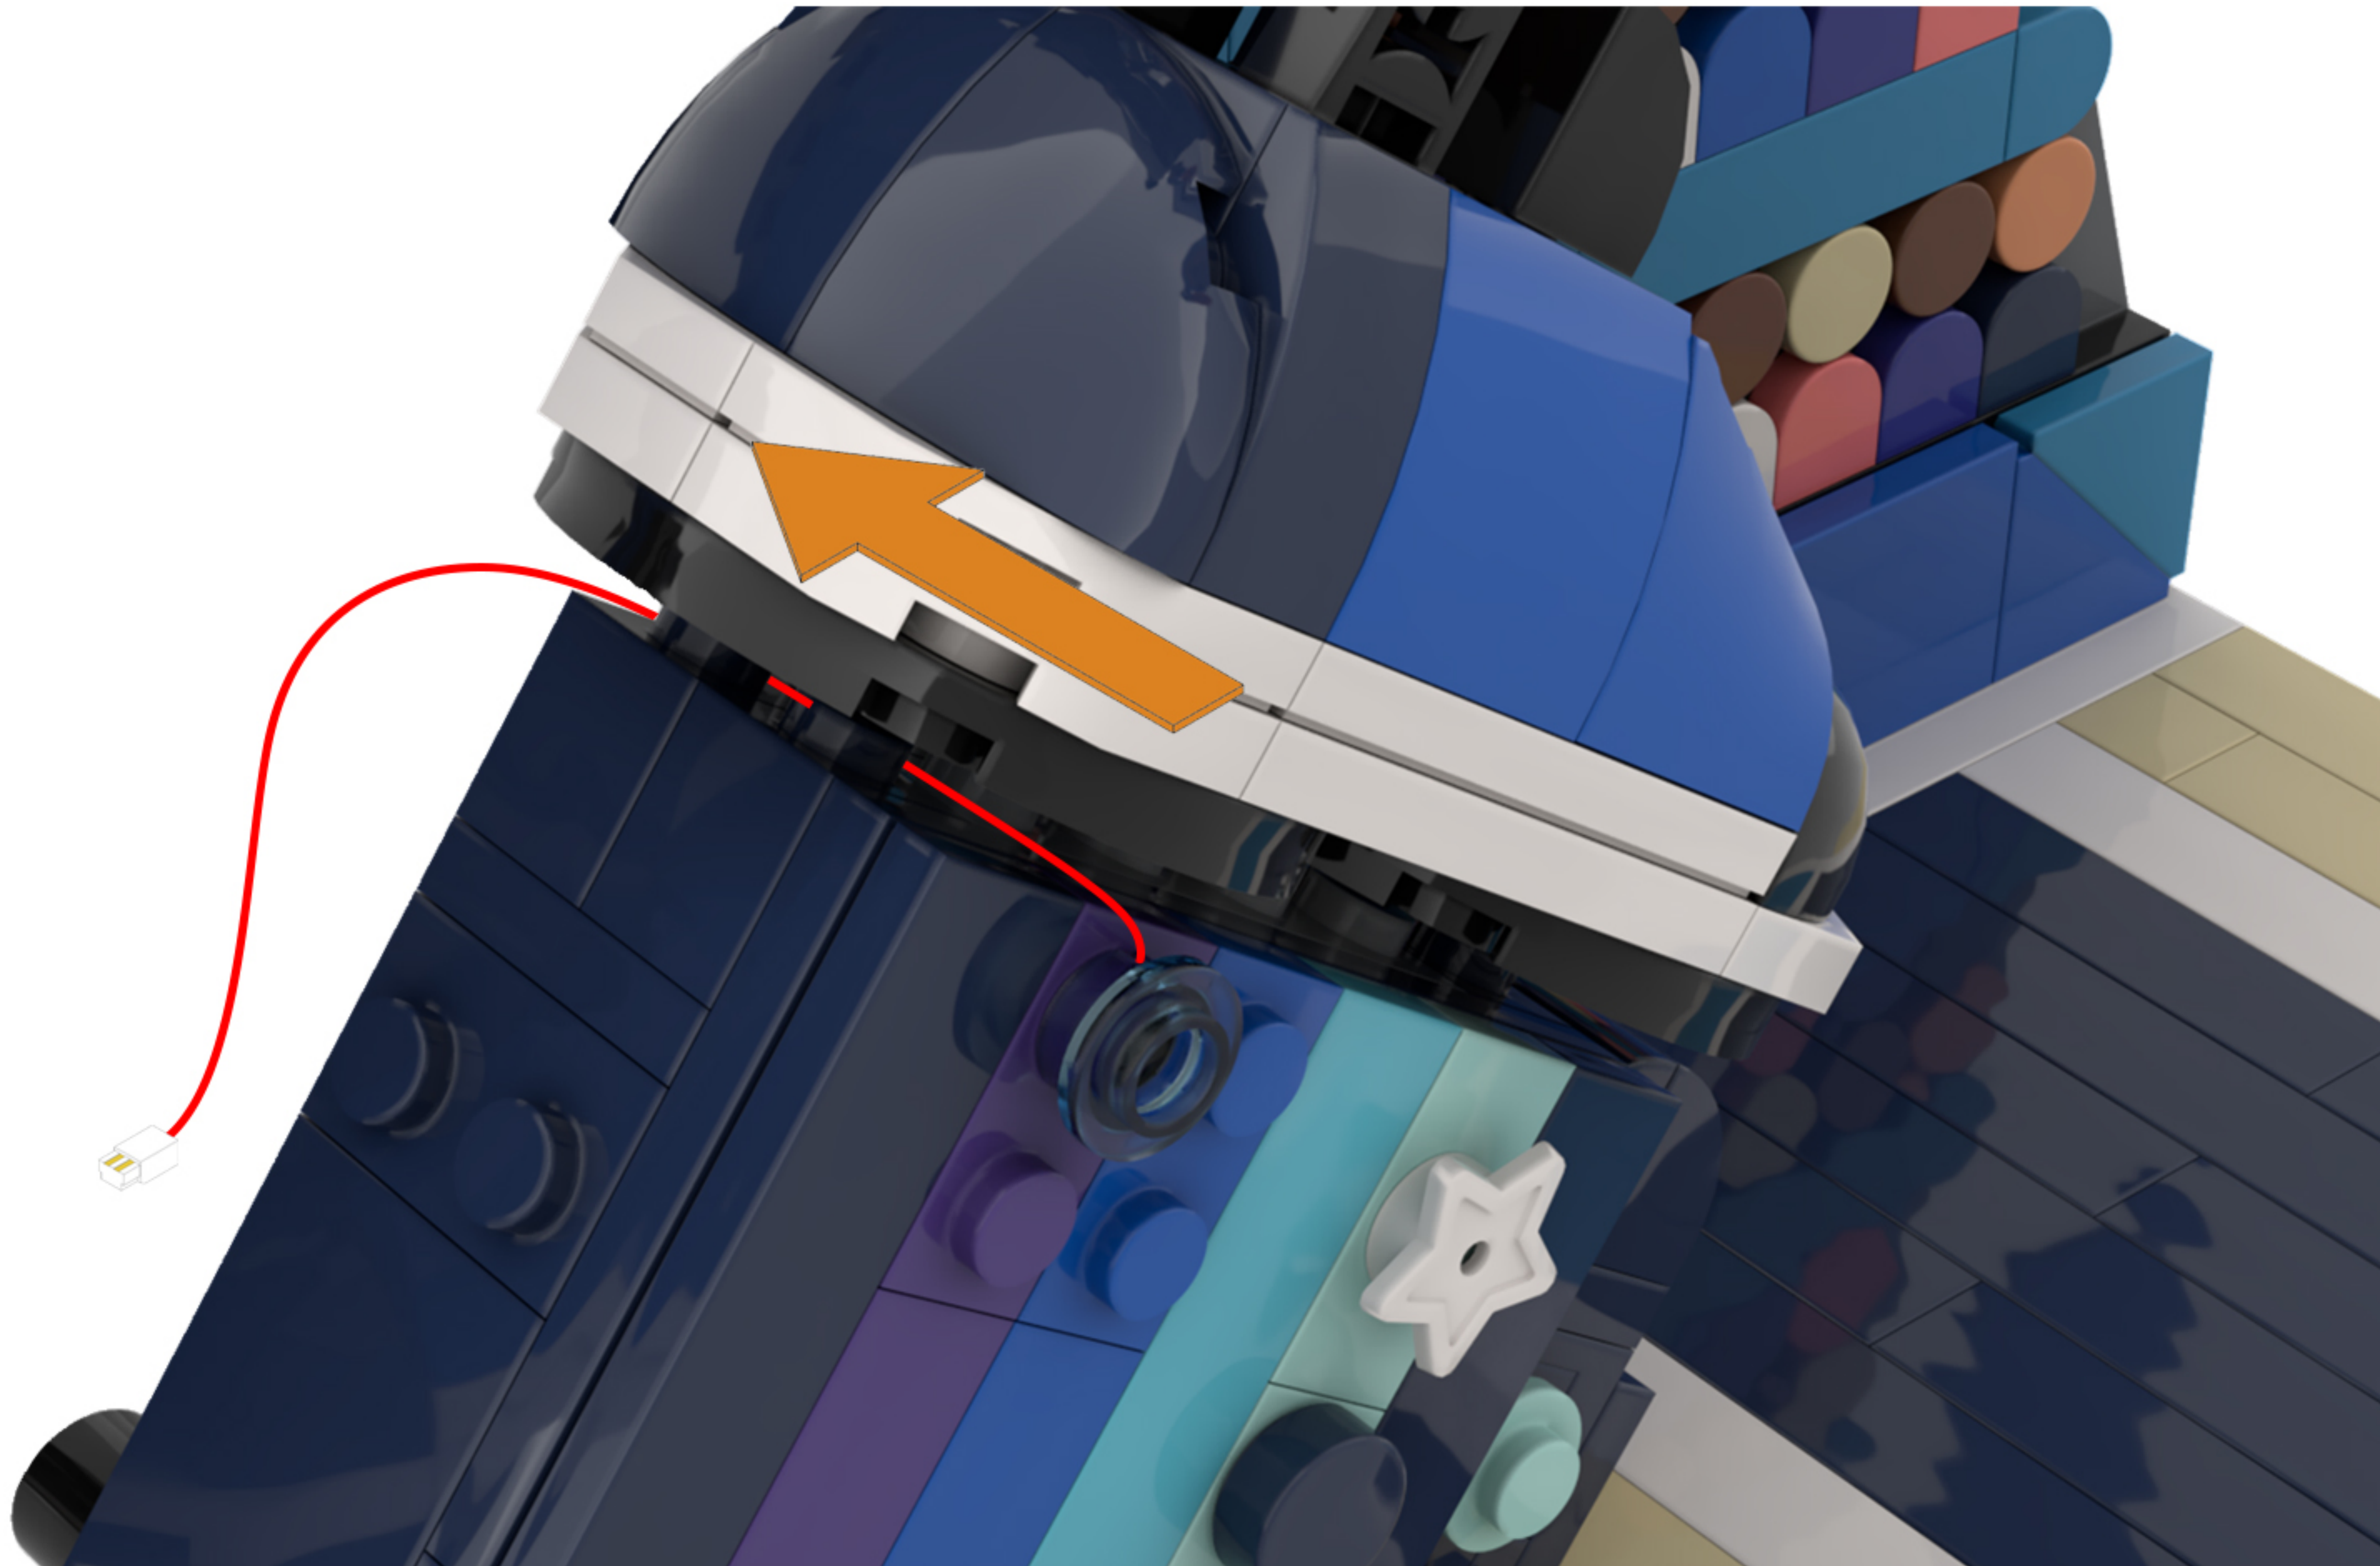

The wire has enough space to avoid being squeezed endowed with longer service life and more stable effect.
